Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 21-38, drawn to a garment with a intrusive device connector attached thereto, classified in class 2, subclass 114.
- II. Claim 39 and 40, drawn to a fastener/connector, classified in class 24.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because any fastener can be used to attach the intrusive device. The subcombination has separate utility such as being a fastener for another item not used with a garment.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
